Abrégé pour FR2975142 (A1)

The system has a flow restrictor device (LS) arranged in a pressure channel (10) between a variable flow pump (P) and a hydraulic receiver (R) e.g. hydraulic motor. A correction device (A) has a distributor comprising an operating slide (30) whose first end (31) is subjected to a real load pressure (Pu) at an outlet of the restrictor device and to a pressure (X) of a calibration spring (310), and second end (32) is subjected to a pressure (Pls) at an inlet of the restrictor device. The correction device controls a control device (C) with a load pressure (Pu2) different from the real pressure.
